Introduction

Special FLibMath module provides the library of standard mathematical functions into the system.

To address the functions of the library you can use static call address "**Special.FLibMath.{Func}()**" or dynamic "**SYS.Special.FLibMath["{Func}"].call()**", "**SYS.Special.FLibMath.{Func}()**". Where *{Func}* — function identifier in the library.

1. Functions

Table 1 provides a description of each function of the library. For each function the evaluation time of execution is measured. The measurement was made on a system with the following parameters: Athlon 64 3000 + (ALTLinux 3.0 (32bit)), by measuring the total time of execution of the function, while calling it 1000 times.

Table 1: The functions of the library of standard mathematical functions

2. User programming API

Some objects of the module provides functions for user's programming.

The object "Functions library" (SYS.Special.FLibMath)

- *ElTp {funcID}(ElTp prm1, ...)* — call the library function *{funcID}*. Return result of the called function.

The object "User function" (SYS.Special.FLibMath["funcID"])

- *ElTp call(ElTp prm1, ...)* — call the function with parameters *<prm{N}>*. Return result of the called function.
